

FinTrace
Follow the evidence.

Explainable transaction investigation
IBM synthetic data · Rules and graphs · Human review

One payment is not the story.

Many senders

Several accounts pay one account.

Fast forwarding

Money arrives, then moves onward.

Connected transfers

A sequence links several accounts.

A pattern is a reason to look closer - not proof of wrongdoing.

A clear path from data to review

Prepare

Validate source
and keep references

→ **Find patterns**

Rules + time-ordered
graph checks

→ **Prioritize**

Fixed points with
visible contributions

→ **Review**

Inspect evidence
and save a decision

Benchmark labels stay outside detection and scoring.

Start with the review overview.

See the workload

Accounts, alerts and supporting findings.

Choose a starting point

Priority bands and evidence families.

Read the limits

Coverage and incomplete searches stay visible.

LIVE DEMO / Overview

Every alert has evidence.

What happened?

Plain explanation, time window and observed measurements.

Why did it trigger?

Visible policy thresholds and exact transfer references.

What can we check?

Inspect the evidence and download the selected finding.

LIVE DEMO / Alert review → Evidence

Priority is not probability.

REVIEW PRIORITY

Where to look next

NOT A PROBABILITY

Not a verdict of crime

Fixed points · Visible contributions · Related clues grouped

An account, in context

One evidence view

Priority, findings and linked alerts for the selected account.

Precise transfers

Sender, receiver, time and both payment amounts.

Honest boundaries

Currencies stay separate. Missing customer context stays missing.

Observed transfers - not a balance or a complete account history.

Connections need a time order.

Account A → **Account B** → **Account C**

10:00 10:10 10:20

Illustrative sequence - not a measured transaction from the dataset.

LIVE DEMO / Network explorer

The reviewer stays in control.

Inspect

Read the finding and its limits before acting.

Record

Name the reviewer, choose the status and give a reason.

Keep the history

Time, actor, action and reason remain in the audit trail.

LIVE DEMO / Review & audit - use the demo database only

Trust the checks - not a claim.

No answer leakage

Benchmark labels never feed detectors or priority scores.

Traceable evidence

Exact amounts, source references and visible analysis limits.

Regression checks

Tests cover boundaries, saved review actions and screens.

Tests check behaviour. They do not prove detection accuracy.

Working now. Planned next.

Working now

Prepared data and evidence
Rules and bounded graphs
Priorities and four app screens
Audited alert review

Future work

Complete case management
General evidence reports
Historical replay
Benchmark evaluation

Show the evidence. Keep the human decision.
